

**IN THE SPECIFICATION:**

**Paragraph beginning at line 17 of page 13 has been amended as follows:**

The charge control circuit 103 has a first charge control mode and a second charge control mode in which a charged electric power is more than that in the first charge control mode, and monitors the accumulated electric power of the electric condenser 102. When the results of the monitoring indicates that a quantity of accumulated electric power exceeds a desired quantity, the electric condenser 102 is charged with electricity in the first charge control mode. On the other hand, when the results of the monitoring indicates that a quantity of accumulated electric power is equal to or less than the desired quantity, the electric condenser 102 is charged with electricity in the second charge control mode.
